

Assessment Services

Simplify compliance by automating and coordinating assessments

Compliance with data privacy regulations is a business requirement that organizations cannot ignore. Compliance helps maintain an acceptable data security and risk posture, but it also assures potential customers that they are working with an organization that prioritizes security and reliability.

In today's complex regulatory landscape, compliance challenges often translate into significant business issues, leading to missed revenue opportunities and delayed market entry. The absence of a proactive compliance strategy exposes organizations to heightened business risks, including security breaches, regulatory-related lawsuits, and fines, ultimately impacting their bottom line and market competitiveness.

The Coalfire® portfolio of assessment services enables a comprehensive approach to address the compliance challenges organizations face. Coalfire offers a compliance management and automation solution that helps manage compliance across multiple regulatory frameworks. The Coalfire Compliance Essentials platform, combined with scalable and predictable expert assessments, reduces business risk, minimizes costs, and accelerates entry into new markets. Coalfire compliance experts are your strategic partners across more industry, regulatory, and global cybersecurity frameworks than any other provider.

Simplifying compliance assessments through automation

Coordinated Assessments

Compliance Capabilities Leader

With over 20 years of compliance experience, the company has more than 600 qualified subject matter experts who hold multiple industry certifications and conduct over 3000 compliance assessments annually across 75+ frameworks.

Tailored Delivery Experience

Coalfire experts are dedicated specialists in specific frameworks, ensuring tailored solutions for each client. Coalfire experts understand the entirety of the client's business and function as strategic partners rather than just as one-time vendors.

Compliance Essentials Platform

Compliance Essentials, the compliance automation platform built from over 20 years of compliance expertise, supports more industry, regulatory, and global cybersecurity frameworks than any other provider. Customers gain on-demand access to Compliance Essentials to manage and mature their compliance programs, add frameworks, manage risks, monitor controls, and prepare for assessments.

Coordinated Assessments Methodology

Coalfire performs single framework assessments, multi-framework coordinated assessments, and technical testing (penetration testing and vulnerability scanning) for over 75 cyber security frameworks. Assessment tasks such as data center visits, control sampling, artifact collection, and on-site interviews are coordinated across multiple frameworks and combined into one audit cycle, eliminating repetitive audit cycles and reducing internal efforts and costs required to achieve compliance.

Begin Your Assessment Journey

By embracing Coalfire Assessment Services, your organization can navigate the complexities of compliance with confidence and adaptability, driving sustained success and growth in dynamic regulatory landscapes.
